

Workflow Review

Gallery.md Notes

Comments are numbered based on their numbered steps in the GALLERY.md file.

1. A workflow, end to end
 1. No issues here.
2. Reading a step
 1. Inputs listed as Pinned don't have any input edges, so who is choosing this connection? The docs say *someone chose it deliberately*, but is that someone the user or a developer?
3. Drop a step on the canvas
 1. No issues.
4. Wiring
 1. "- Hover a label: a sentence explains what that input or output is, and names its kind." Names its kind of what? Should this be names its type?
5. When something's wrong
 1. No issues.
6. Choosing a path
 1. I think this has to be clearer. It wasn't immediately apparent that the Ref options were previous nodes and their outputs.
 2. The dropdown of operators currently contains things like *gte*, which I imagine would be confusing if users weren't familiar with that shorthand. Maybe use the symbols instead?
7. Doing it for every page
 1. It's strange that connecting the Split Document to the Run for Each Item nodes creates the edge between the order-of-operation connectors, even if I start it from the Segments output.
 2. Why *currentSegment*? Is this what the node looks for? That should be made clear to the user, and if it's always this, why do we specify it?
 3. Typing in the field is very laggy. I suspect it's the same problem as the HITL page, where updates are causing a lot of the page to re-render when it really shouldn't if broken up.
 4. The wire is not green, it is purple, but so is the *Run for Each Item* node, so maybe that's just an expected change.
8. Try it, and watch

1. The first quote reads: ***This stop needs the engine running**. If **Try** is greyed out, hover it — it will say why. If nothing happens at all, the engine isn't up: skip to stop 11.*
 1. Is it meant to be stop, not step?
2. The first actual instruction here is just *Do this*. What is it asking someone to do?
3. There aren't any instructions on what it wants from a user in the Run sidebar. Not sure what to do with this text field when it's just an unpopulated `{}`.
4. There is no Try button, only Run.
5. Ended up running the workflow through the Upload page instead.

9. Reading the results

1. Could not complete because standard workflow is failing at Poll OCR step. What has changed since the develop branch that would affect this?

10. What ran, and when

1. Same issue as #9

11. Versions

1. The *Compare to Head* feature could be clearer if it showed an actual diff, not just both versions in full.
2. It did not appear to bring back the old version as a new version in the UI as the instructions suggest. It looks like it just tags it as the HEAD.

12. Turn it into an API

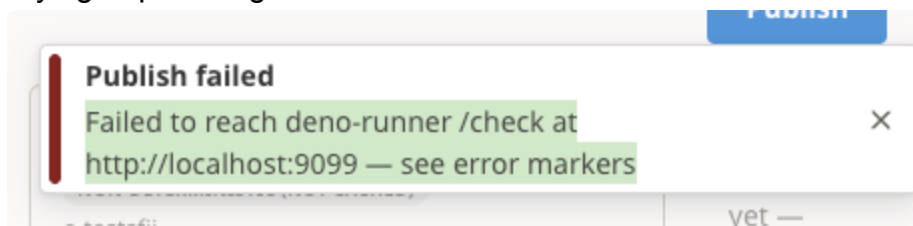

1. Instructions outdated. It is the Run button, followed by the *Call from outside* tab.
2. Otherwise makes sense

13. Let people upload files

1. *Run this workflow* doesn't exist. It's just *Run*.
2. Works otherwise.

14. Write your own step

1. The editor occasionally forces the cursor to the end of the last line. Maybe this is happening when it reloads? Makes it very frustrating to type.
2. Instructions make it sound like the green tick should be on the right, but it's below.
 1. Couldn't get it to turn red. What's it looking for?
3. How can a user know what the Document type contains?
4. Trying to publish gives this error:

15. When a step goes missing

1. Appropriate name, because the *Demo - Deleted custom node* doesn't appear to have been seeded.

16. Ask the assistant to build it

1. I don't think I have the credentials for this. Which subscription is it meant to be using?

Misc Notes

1. Dynamic nodes page. Button contains two + symbols:

+ + Create your first

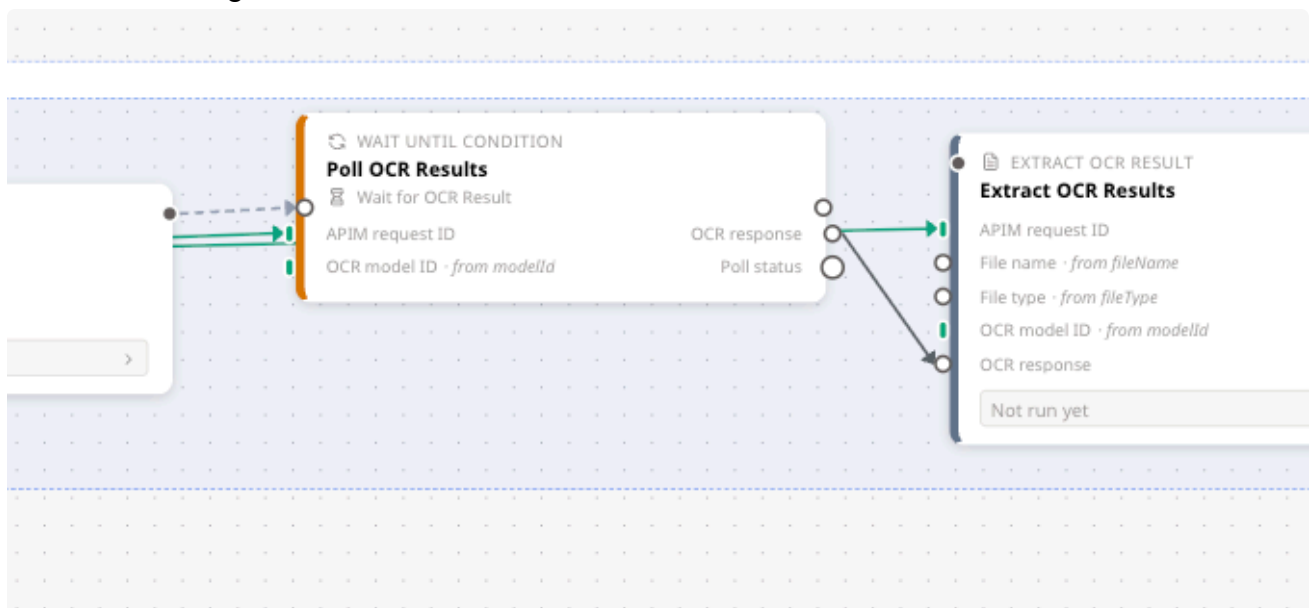

2. Turning Simplified view on and off does some weird things to the formatting.

3. Why do some nodes connect with the run-order connections, but others don't?

These connector nodes also appear at different heights on the nodes.

Is there meaning behind the difference in the size of the Poll status connector?

4. Could we use these colours in the sidebar list of nodes?

CARD BORDERS

- Does work
- Decides where to go next
- Fans out or back in
- Waits for a person
- Runs another workflow

Some of the categories in this legend could be more intuitive. Like, what's a "Judgement about a document"?

5. Why does a node like Poll OCR Results have so many more fields than something like Extract OCR Results?

Activity

Activity type

The activity invoked on each poll iteration.

Wait for OCR Result

Parameters

No additional fields.

Termination condition

Polling stops when this condition evaluates to true.

Expression type

Comparison

Operator

not-equals

Left

Poll OCR Results → Poll status

Submit to Azure OCR → Request ID

apimRequestId · RequestId · 2 steps upstream

Submit to Azure OCR → Submission status code

statusCode · Artifact · 2 steps upstream

Submit to Azure OCR → Submission headers

headers · Artifact · 2 steps upstream

Prepare File Data → Prepared file data

preparedData · PreparedFile · 3 steps upstream

[Enter a variable manually](#)

Ref

Literal

running

6. It should be clearer where the Demo workflows come from and how to load them. I needed to find a separate file about seeding this separate demo data, then figure out that I had to generate an API key in the app and update some ENVs.
7. What do the parts reference on the demo workflow names? They don't correspond with the parts of the walkthrough seemingly.
8. Cannot seem to manually connect order-of-operations edges. Is this intentional?
9. We might need a search bar for the workflow list. Even with this number of workflows, it can be hard to find the one you want.
